An energetic, passionate and result driven web developer who is able to work alongside other talented web professionals in creating websites and services to the highest standards.
Takes responsibility for personal development and continually learning and upgrading skills to stay at the cutting edge of web development.

PROJECTS

Maps Saver — *Web App*

- SPA App intended for collecting trips which are described by waypoints, tracks and routes.
- Trips are stored by importing GPX files which holds given coordinates
- User authentication over API is secured by ssl encryption
- Trip preview feature which project tracks and routes using Google Maps API for a saved trip
- Developed using VueJS(Vuex, Vuetify) and Lumen for backend service

E-Shop — *E-commerce platform*

- Built custom store for selling tech products as college project
- Implemented shopping cart and online payment functionalities using Stripe API
- Created wish list feature which require visitors to register and validate their email address
- Added multiple currency support
- Developed admin panel for content management as SPA using Vuejs

Electro-shop — *E-commerce platform*

- Implemented localization, currently English and Serbian are supported
- Same payment and wishlist functionalities
- Same multiple currency support
- Implemented admin panel using Laravel Voyager package which provides a complete admin system

NetCinema — *Informative site*

- Intended for showing information about the latest and upcoming movies in cinemas
- Developed using Drupal CMS
- Created custom module that allows visitors to like or dislike specific movie but require visitor email registration
